The adaptive man exist on the basis of evolutionary laws which do not depend on the man, but the man, his consciousness and his actions are completely determined by them.

But creative man does not continue evolutionary development. The creative man is the essence, changing evolutionary type of existence of the nature on historical type of existence of the nature.

Since there is a man, own essence of the nature not only realization, own essence of the nature is created by hands of the creative man.

The creative man is an essence creating own history, new own abilities and processes of own development.

But all systems of modern education are a way of transformation by the adaptive man of another's opportunities in own opportunities as a result of their assimilation.

Such scheme underlies adaptive type of education. Adaptive education contradicts creative essence of the man.

Adaptive education suppress creative essence of the man. That leads to amplification of psychological, ethnic, social and other conflicts in our modern society.

It is necessary to leave attempts of formation of the man by adaptive ways and to follow the road of creation not-adaptive education systems. Only thus through creation of new generation of people, free from social prejudices, we shall open our society closed for development, we shall transform it to a society, universal and opened for infinite development.
