

CREATIVE EDUCATION AS A PRACTICAL PROJECT

Creative education is realized in the system of becoming complicated problem situations.

The means of the solving new problem situations are significances of a new type produced by the students themselves. These produced significances are the means of cognition of a new type.

The method of production of significances is self-creative activity.

The method of organization of self-production significances by the students is reconstructions of history of development creative activity and transfer of it's internal historical laws of development into new conditions.

Methodology system of organization of creative education is becoming complicated in time means of organization self-production significances, the means of production of which are awareness of type.

The experimental appropriate results of pilot projects rated the supposition that the creative education forms the ability to generate new significances (knowledge) as means of solving problem situations.

What is very important that this ability is formed at all the students.
